$\qquad$ (day/time)
a) By rotating the front carbon clockwise and $60^{\circ}$ at a time, complete the series of Newman projections ( $0^{\circ} \rightarrow 360^{\circ}$ rotation). Assign a label to each (A, B, etc.) for use in part b.

A
b) Sketch an energy diagram showing the relative energies of the above conformers. Start with A at $0^{\circ}$. Remember to fully label your diagram.

(Hint:first determine which are highest in energy, which are lowest in energy and which have the same energy)
